

# LOYOLA ACADEMY

Alwal, Secunderabad 500010

*(Autonomous and affiliated to Osmania University)*

**Re-accredited with 'A' Grade (3.2/4.0 CGPA) by NAAC**

**A "College with Potential for Excellence" by UGC**

## **CERTIFICATE**

### **[Mini project]**

This is to certify that, this is a Bonafide Record of the work done as a partial fulfillment of the course **MCA** Third year First semester in the college of during the year 2020-2021.

Name : K.SNEHA

Class : DMCA

Hall Ticket No. : 111718039107

Signature of Internal Examiner

Principal

Signature of External Examiner

## **CERTIFICATE**

This is to certify that this project entitled **“STUDENT RESULT MANAGEMENT SYSTEM”** is a Bonafide work carried out by **K.SNEHA** bearing Hall Ticket No:**111718039107** in **LOYOLA ACADEMY** and Submitted to **OSMANIA UNIVERSITY** in partial fulfillment of the requirements for the award of **Master of Computer Applications.**

K SNEHA

ID: 111718039107

## ACKNOWLEDGEMENT

“I ask successful” makes everyone happy. But the happiness will gold without glitter if we didn’t state the persons who have supported us to make it a success.

Success will be crowned to people who made it reality but people who constant guidance and encouragement made it possible will be crowned first on the eve of success.

This acknowledgement transcends the reality of formality when we would like to express deep gratitude and respect to all those people behind the screen who guided, inspired and helped me for the completion of our project work.

I consider myself lucky enough to get such a project. This project would as an asset to my academic profile.

I would like to express to thankfulness to my project guide **Mrs.Nagalakshmi** for her constant motivation and valuable help through the project work.

I also extend my thanks to my team member for their co-operation during my course. Finally I would thank my friends for their co-operation to complete this project.

## **ABSTRACT**

Result Management System is a web based application developed to maintain the results of Students. The main objective of the project is to provide the examination result to the student in a simple way. This project is useful for students and institutions for getting the results in simple manner.

This Project Contains three modules. Admin Module, Student Module, Faculty Module. Admin Module is used to create and manage the subjects, classes, Add the students, Give privilege to lecturers for adding result, generate Results.

Faculty Module is used for entering respective class marks. Students can view and download results.

## **1. INTRODUCTION**

This document aims at defining overall software requirement for “Student Result Management System”.Efforts have been made to define the requirements exhaustively and accurately.

This system maintains all the academic records and result calculation.It also maintains Organizational structure,functionality and responsibilities.

## 2. LITERATURE SURVEY

### 2.1. Java Server Pages

JSP not only enjoys cross-platform and cross-Web-server support, but effectively melds the power of server-side Java technology with features of static HTML pages.

JSP pages typically comprise of: Static HTML / XML components.

Special JSP tags.

Optionally, snippets of code written in the java programming language called “script lets.”

#### **JSP Architecture**

The purpose of JSP is to provide a declarative, presentation-centric method of developing servlets. JSP pages are subject to a translation phase and a request-processing phase. The translation phase is carried out only once, unless the JSP page changes, in which case it is repeated. The JSP engine itself typically carries out the translation phase, when it receives a request for the JSP page for the first time.

**Life Cycle of A JSP:** Life cycle of a JSP consists of the following three methods:

\_jspInit

\_jspService

\_jspDestroy

#### **Session Management**

Many applications require that a series of requests from a client be associated with one another. Sessions are represented by an Http Session object. A session can be accessed by calling the get Session () method of a request object. This method returns the current session

associated with this request, or, if the request does not have a session, it creates one. The timeout period can be accessed by using a session's [get\set] Max Inactive Interval methods.

### **Session Tracking**

A Web container can use several methods to associate a session with a user, all of which involve passing an identifier between the client and the server. The identifier can be maintained on the client as a cookie, or the Web component can include the identifier in every URL that is returned to the client.

In fact, on many servers, they use cookies if the browser supports them, but automatically revert to URL-rewriting when cookies are unsupported or explicitly disabled.

### **3.EXISTING SYSTEM**

- Existing Process of getting information for the student is done manually.
- All the wanted information need to be provided by the administration
- If the students want to know the results of the particular subject they should wait for long time because work is done manually.
- The information about their courses,results and other information accessing is not possible.

### **4.PROPOSED SYSTEM**

- ❖ The Application will have capability to maintain information about the students enrolled in the subjects offered to students during different classes.
- ❖ The marks obtained by the students in different subjects in various class.
- ❖ The Software will also generate tabulation sheet regarding student information,class wise marks list and GPA calculation.
- ❖ The application will greatly simply and speed up the result preparation and management process.
- ❖ The application is flexible and can easily access by the student.

## **5. SOFTWARE AND HARDWARE SPECIFICATIONS**

### **5.1.1 Software requirements**

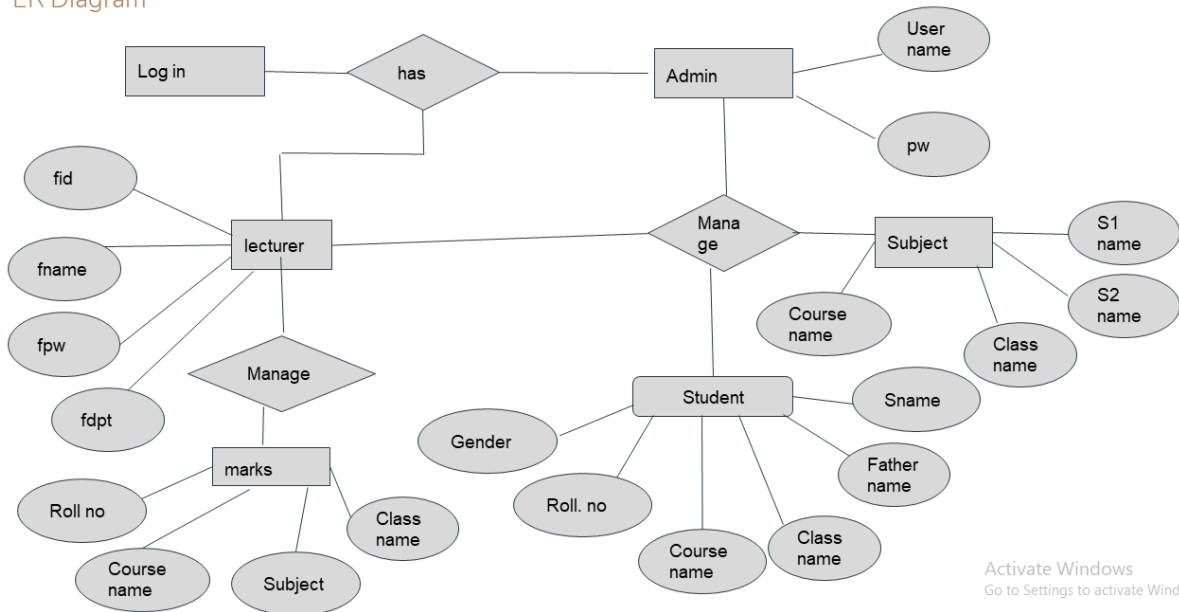

Operating System	: Windows XP,7,Later
Database Server	: Mysql
IDE/Workbench	: My Eclipse
User Interface	: HTML,CSS,Bootstrap,JavaScript
Programming Language	: Java
Web Applications	:JDBC,JSP
Web Server	: Tomcat 8.5

### **5.1.2 Hardware requirements**

Processor	: Dual Core
RAM	: 1 GB RAM
Hard Disk	: 140GB

## 5.2 ER Diagram:

ER Diagram

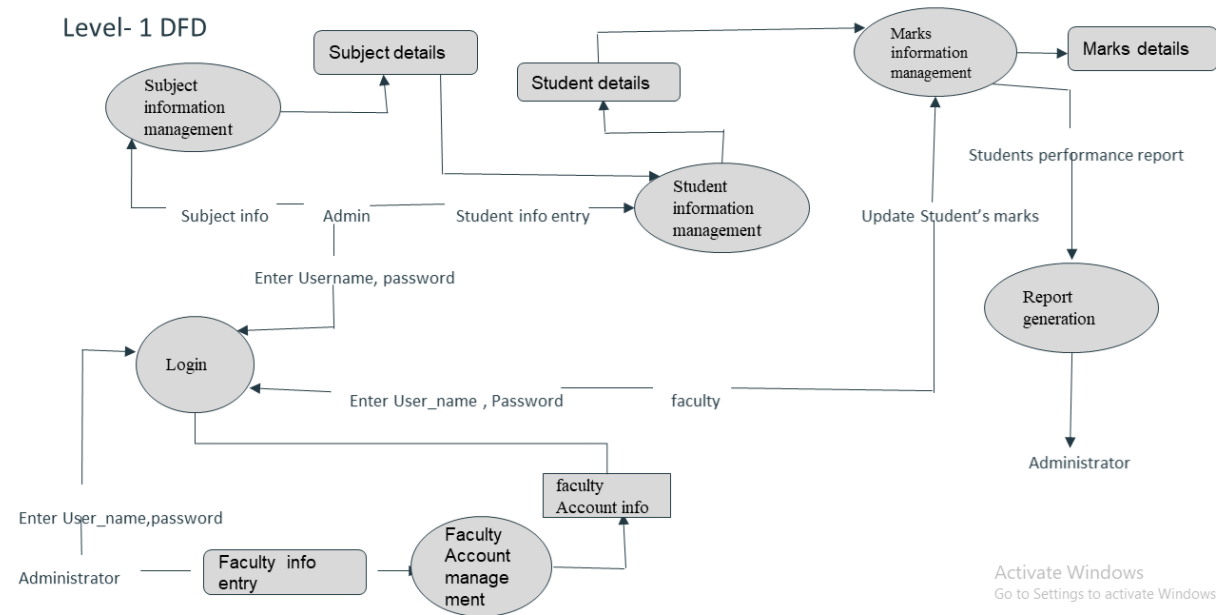

Activate Windows  
Go to Settings to activate Windows

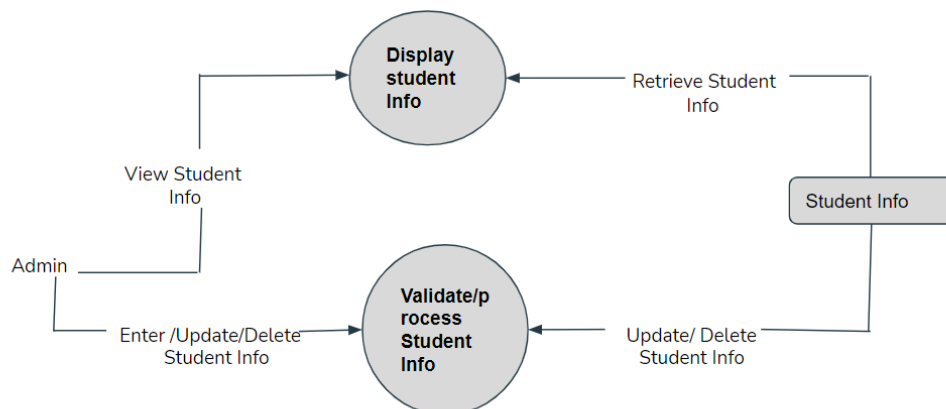

### 5.3 DFD:

#### Level 0 DFD:

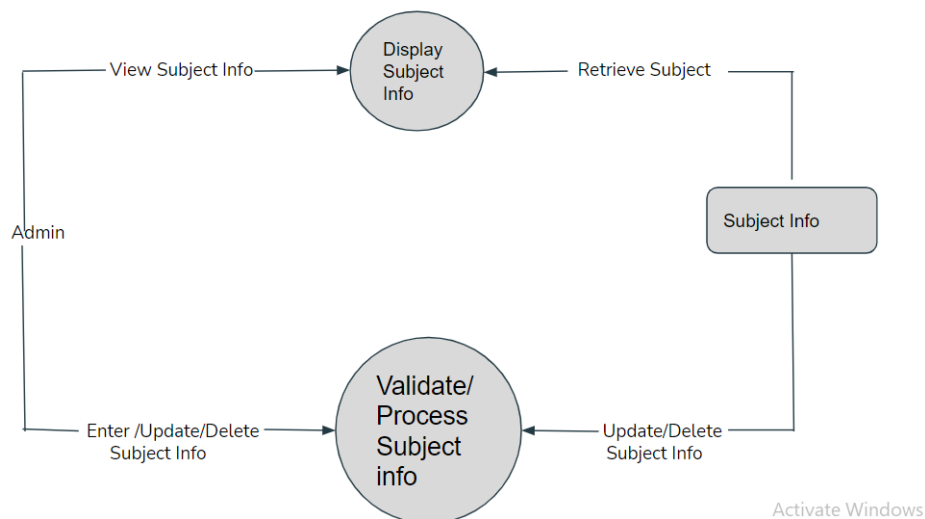

##### CONTEXT DIAGRAM

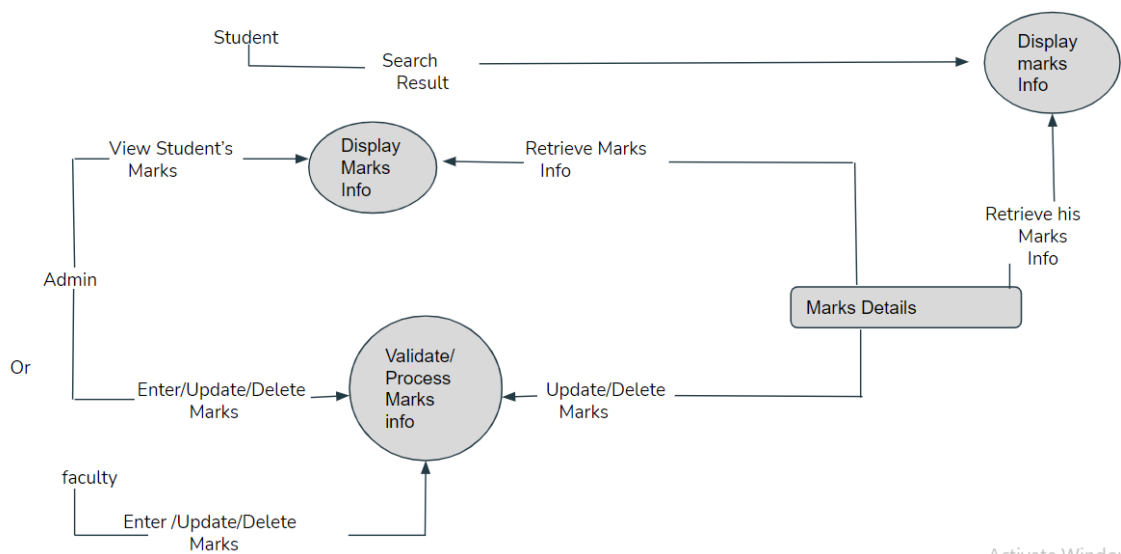

### Level-2 DFD of Student information management

### Level-2 DFD of Subject information management

Level-2 DFD of Marks information management

Activate Windows  
Go to Settings to activate Windows

## 5.4 Module Description

### Modules:

- Admin
- Faculty
- Student

### Description

#### **Admin:**

- 1.Admin login with username and password
- 2.Admin add/view/delete the lecturers and student details
- 3.Create and Manage the subjects,classes
- 4.Admin gives privileges to the faculty for entering marks
- 5.Admin view the student results and generate reports

#### **Faculty:**

- 1.Faculty login with username and password
- 2.Faculty can enter ,update student marks

#### **Student:**

- 1.Students can view the results
- 2.Students can download the results

## 6.IMPLEMENTATION

### 6.1 Source Code:

## **7.APPLICATIONS**

- This application software is developed for educational Institutions
- Stores the information or the overall details of student results details on the local server
- It helps to modify the details of the students,faculty as select or delete.

## **8.CONCLUSION:**

- Student result management system lead to a better organization structure since the result management is well structured and also lead to better as well as efficient utilization of resources.
- Student result management system can be used by education institutes to maintain the records of students easily.
- Achieving this objective is difficult using a manual system as the information is scattered,can be redundant and collecting relevant information may be very time consuming.All this problems are solved using this project
